# Find Nearby Users

## Introduction

The Solo Mobile app allows you to keep in touch with and view the last-known location of your teammates using the built-in *Nearby* feature.

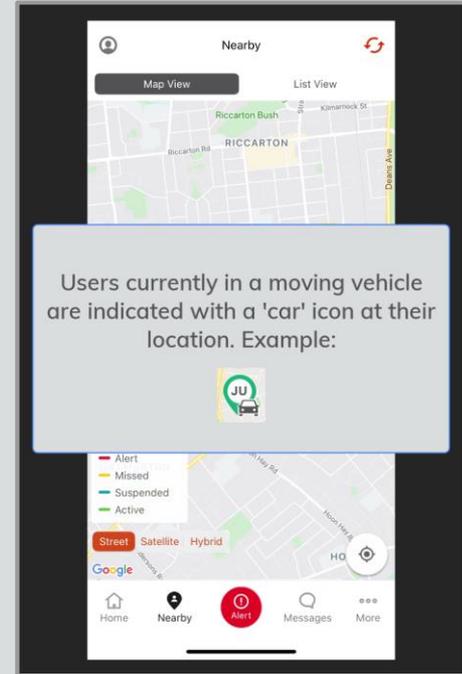

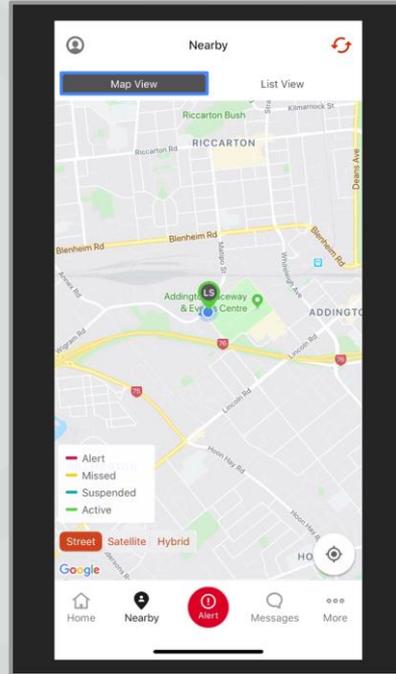

# Find Nearby Users

## Map View

In *Map View*, the geographic location of other Solo users who are part of your team or teams and who are currently in an active session are indicated via a marker icon which bears their initials.

The marker icon will be coloured according to the User's current Solo status, a key for which is visible on-screen.

**Switch** to different map viewing modes via the standard Google Maps controls.

# Find Nearby Users

## Teammate Locations

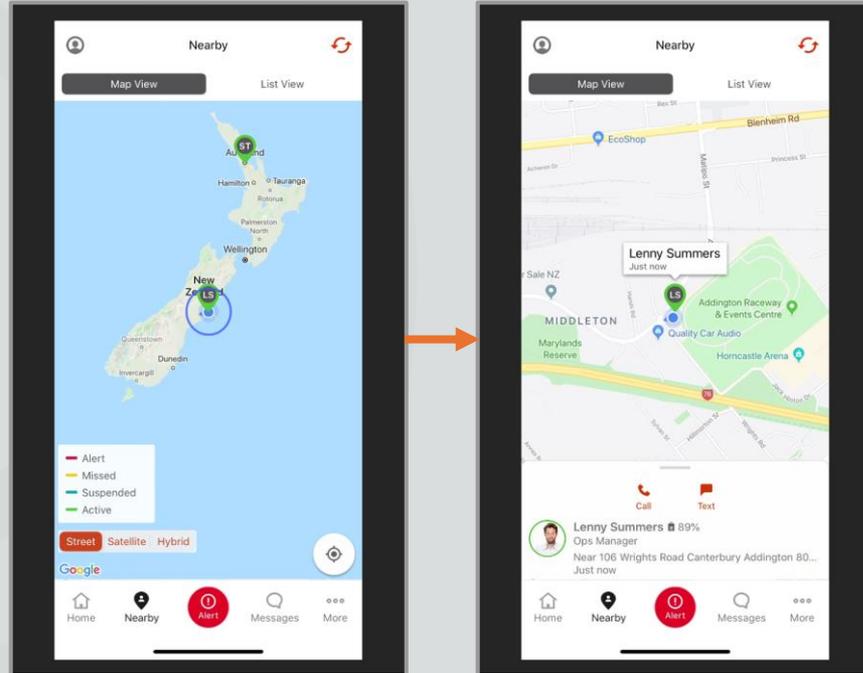

By default, users within your immediate vicinity are shown, however you may **zoom in** or **zoom out** as far as required to view the locations of all active teammates, no matter where they currently are.

# Find Nearby Users

## User Details

**Tap** a marker to view that Person's full details, and **call** or **message** them using your device's default calling or messaging apps via the relevant icons.

# Find Nearby Users

## List View

The *List View* displays all of your in-session teammates, regardless of their geographic location.

As with the *Map View*, colour coding is used to indicate each person's current Solo status and users currently in a moving vehicle are indicated with a 'car' icon.

Again, **tap** a person to reveal their details or to communicate with them.
